9. Caveats & notes

0 Framing & scope

This session is not running on your Mac. It executes inside an ephemeral **Ubuntu 24.04 cloud VM** (Claude Code on the web). "Locally" below means this container; your Mac's installed apps are not visible from here. The container is reclaimed after inactivity, so anything worth keeping is committed to git.

There is no distinct product literally named "Outcome Engineers dashboard." What you have is **this Claude Code session plus the connectors wired into your account.**

1 Compute environment (this cloud VM)

Host OS	Ubuntu 24.04.4 LTS (Noble Numbat)
Kernel	Linux 6.18.5, x86_64
Nature	Isolated, ephemeral container — cloned fresh, reclaimed after inactivity
Outbound network	Open (verified HTTPS 200 to github.com); governed by environment network policy

Language runtimes installed

Runtime	Version	Runtime	Version
Node.js	22.22.2	Ruby	3.3.6
npm	10.9.7	Go	installed
pnpm	10.33.0	Rust / Cargo	1.94.1
yarn	1.22.22	Java	OpenJDK 21.0.10
Bun	1.3.11	PHP	8.4.19
Python	3.11.15 (+ pip 24.0)		

CLI tooling installed

git 2.43 · curl 8.5 · wget 1.21 · jq 1.7 · make 4.3 · gcc 13.3 · Docker CLI 29.3.1 · LibreOffice · WeasyPrint 69

Not installed in this VM

gh · wrangler (global; via npx) · docker-compose · kubectl · sqlite3 · deno

Docker: the CLI is present but the **daemon is NOT running** in this VM — containers cannot be built or run here. A `docker-compose.yml` authored here is meant to run on your Mac.

2 Built-in Claude Code capabilities

Category	Tools
File / code	Read, Write, Edit, Glob, Grep
Execution	Bash (foreground + background), Monitor (event streams)
Web	WebSearch, WebFetch
Delegation (sub-agents)	claude, general-purpose, Explore, Plan, claude-code-guide, statusline-setup
User interaction	AskUserQuestion, SendUserFile
Tool discovery	ToolSearch (loads deferred MCP tool schemas on demand)

3 Skills (slash-commands) available

- deep-research
- code-review
- security-review
- review
- verify
- run
- init
- simplify
- update-config
- session-start-hook
- keybindings-help
- fewer-permission-prompts
- loop
- claude-api
- create-visual-design
- html-export-readiness

4 GitHub integration

Tooling	GitHub MCP — full PR / issue / CI / code-search
Current repo scope	obsidianinformatics-lab/astro-blog-starter-template
Expand scope	list_repos → add_repo
CLI	No gh — all GitHub ops route through the MCP

5 Connected MCP servers / connectors (~48)

Wired into your account, reachable via ToolSearch. They connect/disconnect intermittently; each exposes 2-130+ tools loaded on demand.

Design / docs / media

Connector	Purpose
Adobe (Creative Cloud / Express / Firefly)	Image editing, vectorize, PDF/INDD, video, fonts (~82 tools)
Figma	Design↔code, FigJam, Code Connect
Gamma	Presentations / docs / webpages
SlidesGPT	Slide generation
Lucid	Diagrams / whiteboard
Mermaid Chart	Diagram rendering
tldraw	Canvas / diagramming
Goodnotes	Notes / markdown / SVG / diagrams
Send	HTML document authoring
HyperFrames (HeyGen)	Programmatic HTML video
Zoom for Claude	Meeting recordings / transcripts

Productivity / workflow / signing

Connector	Purpose
Notion	Docs, databases, projects
Linear	Issues, projects, cycles
DocuSign	E-signature / agreements
DocuSeal	E-signature / templates
IFTTT	Automation applets
Zapier	Bridge to 9,000+ apps
Listen Labs	User-research studies

Sales / marketing / SEO

Connector	Purpose
Apollo.io	Leads / CRM enrichment
Ahrefs	SEO / backlinks / traffic
Semrush	SEO / competitive intelligence
Contentsquare	Digital-experience analytics

Cloud / dev infrastructure

Connector	Purpose
Cloudflare Developer Platform	Workers, D1, R2, KV, Hyperdrive, docs
QuickNode	Blockchain RPC endpoints
Sentry	Error monitoring + Seer analysis
Hugging Face	Models / datasets / papers / spaces

Finance / crypto / markets

Connector	Purpose
FMP (Financial Modeling Prep)	Equities / SEC / economics
CoinDesk	Crypto market data
Crypto.com	Exchange market data
LunarCrush	Social / crypto sentiment
Blockscout	On-chain / blockchain explorer

Legal / civic

Connector	Purpose
CourtListener	Federal case law / dockets
Describe Legal Engine	Structured U.S. primary law
Midpage	Legal research
Courtroom5	Case intake / deadlines / guidance
Granted	U.S. grants database

Commerce / travel / local

Connector	Purpose
Instacart	Grocery / products
Square	Commerce / payments API
Uber / Uber Eats	Rides / food delivery
DirectBooker / lastminute.com	Hotels / flights
GoDaddy	Domain search / availability
Coupler.io	Data-integration pipelines (400+ sources)
Felt	Collaborative mapping
Tango	Opportunity / API search

Security / trust

Connector	Purpose
Malwarebytes ScamGuard	Link / email / phone reputation checks

6 Live verification results

Connectors probed live during report generation to confirm authentication & reachability:

Target	Check	Result
Local VM network	HTTPS reachability	VERIFIED github.com → 200
GitHub MCP	get_me → login ObsidianInformatics-lab	VERIFIED
Cloudflare Dev Platform	workers_list → 5 Workers, account authenticated	VERIFIED
Hugging Face	hf_whoami → authenticated as BecauseYNot	VERIFIED

Pills: **VERIFIED** reachable & authenticated · **AUTH NEEDED** connected but requires OAuth · **UNVERIFIED** not probed this run. Most other connectors are wired but were not individually exercised; many require their own OAuth before returning live data.

7 Category cross-reference

Your term	Where it maps in this report
Apps / programs	Runtimes & CLIs (\$1) + connectors (\$5)
Skills	\$3
MCPs / connectors	\$5
Docker connections	CLI present, daemon unavailable (\$1)
Web interfaces / APIs	The \$5 connectors are API-backed web services
Capabilities / extensions	\$2 built-ins + \$3 skills
Virtual machine	The Ubuntu container itself (\$1)

8 Caveats & notes

The earlier OSINT/security tools (nmap, nuclei, theHarvester, etc.) are **not** installed in this VM — that Brewfile targets your Mac.

Several MCP connectors require **OAuth / authentication** to return live data (e.g., Apollo, Ahrefs, Notion, DocuSign) even though they are connected.

MCP connectors flap (connect/disconnect) during a session; this is normal and does not indicate lost access. The set reflects this session and can differ elsewhere.

Report generated within a Claude Code web session for record-keeping.
